Kata Kunci:

Motivasi, Bahasa, Pengaruh.

Abstrak

Artikel ini menjelaskan bagaimana pengaruh bahasa motivasi terhadap pasien. Bahkan sampai pada sikap, tindakan atau perasaan dari sugesti pembicara. Di sini penuturnya adalah dokter dan perawat, serta keluarga di sekitar pasien. Bagaimana kekuatan bahasa mempengaruhi pasien virus corona. Kekuatan bahasa di sini difokuskan pada bagaimana bahasa bertransformasi ke dalam komunikasi. Bagaimana bahasa digunakan untuk membuat penderitaan, kenyamanan, dan kondisi yang lebih baik segera membaik. Penulis telah melakukan observasi terhadap lebih dari 15 orang penyintas virus corona. Dengan menggunakan penelitian kualitatif, penulis melakukan percakapan antara petugas medis dan non-medis dengan pasien. Kemudian orang yang menderita virus corona. Penulis mendapatkan bahwa bahasa adalah strategi penting untuk membuat pasien menjadi lebih, dari awal kami telah mendapatkan beberapa informasi tentang bagaimana virus corona dijelaskan oleh media sosial, pemerintah, petugas kesehatan, dll. Masyarakat membandingkan beberapa kesimpulan dari informasi media sosial dengan informasi dari pemerintah, tenaga kesehatan atau bahkan informasi dari organisasi kesehatan dunia (WHO). Agar lebih nyata dan akurat dalam menanggapi permasalahan tentang korban covid-19 ini. Faktanya, kondisi lingkungan kesehatan memberikan penanganan yang mengejutkan. Beberapa dokter mengatakan bahwa mereka masih belajar untuk mengatasi situasi kritis. Namun solusi alternatifnya adalah dengan mengubah pola pikir maka perbuatan akan berubah.

Key Word:

Motivation, Of Language, Influences.

Abstract

This article explained how the motivation language affects to the patient. Even to the manner, act or into the feeling from the suggestion of the speaker. In here the speaker is doctor and nurses, and also the family around the patient. How the language power influences the patient of corona virus. The power of language, in here, focused on the way of the language transform to the communication. How the language used to make the suffering, comfortable and better condition soon. The writer has taken some observation to about more than 15 coronavirus survivors. By using qualitative research, getting the conversation among the medical worker and non-medical worker into the patient. Then person who is suffering the corona virus. The writer get that a language is an important strategy to make the patient becoming more, from the beginning we have get some information about how the corona virus was explained by social media, government and health worker etc. People compare some conclusion of the social media information into the information from our government, health worker or even from world health organization (WHO) information. In order to make it real and accurate to respond the problem about the covid-19 victim. In fact, the condition of health environment brings a surprise handling. Some doctor say that they are still learn to overcome the critical situation. Yet the alternative solution is the mind set then the deed will be changing.

INTRODUCTION

In 2019 until now, it has been 5 years covid-9 around us, has taken human life, even it has caused by late handling, lack of medicine or other relate to the medical problem. Yet some aspect that should be another alternative of controlling the language communication that used through the patient or the sufferer. Another important aspect that should be support is the corona virus-19 survivor through their day. What is the specific treatment of their motivation from their selves or from outsides? Power of language of himself or herself and the nurse or doctor who take care them while the illness. The language express during the communication happened. In the discussion of motivation an accepted distinction is made between extrinsic that is motivation

which comes from outside and from inside. extrinsic motivation is the result of any number of outside factors, for example the need to pass the exam, the hope of financial reward or the possibility of future travel. (Nining Yus Mei and Defrinal, 2022)

In conclusion the writer gets that there will be correlated of language and the suggestion into the powerful to fulfill in each sentences produces, to make people well soon. The power of the language expresses will save the death rate properly. This way, the use of technology makes the language learning process easier and more convenient for students. This finding was confirmed by the results of the present survey as all of the linguistic students in the survey agreed with the fact that the technology enables them to have better control over their language learning experience and develop English language skills anytime and anywhere (Pradana et al., 2022)

Language, a system of conventional spoken, manual (signed), or written symbols by means of which human beings, as members of a social group and participants in its culture, express themselves. The functions of language include communication, the expression of identity, play, imaginative expression, and emotional release, Robert (2016:15). The expression, emotion and everything relate to language will conceive by the reader or the receiver, as his expressing of speaker purposes. Every purpose of the speaker told to the receiver/reader get the point then do what the speaker ask to. The nature of the evaluation process in each of these scenarios will probably differ as well. In the first type of situation, teachers may have quite a large amount of choice in the materials they select (Mei, 2019)

Language is something that will explain somebody about them. Yet, language also can be helpful for somebody the expert say that language while it express to other by communication it will be transfer a huge thing to other. On the other hand, language in a communication will influence the purpose of communication, to make people fulfill what the speaker want. (Mei et al., 2024) From an Islamic perspective, teachers' social competence is inspired by the exemplary behavior of the Prophet Muhammad, as described in Surah Al-Ahzab, verse 21. The Prophet demonstrated kindness, approachability, and a heart-centered communication style that respected others' feelings. (Mei, 2019) (Melani, 2020) The result of the research indicates that to help the students be more enthusiastic in conducting EL and help teachers who have no idea how to implement EL, it is possible to use technology, in this case, Google Classroom. However, the research is only limited to investigating the practice of EL to second-semester students who are sophomore. It would be challenging also to investigate how senior students respond to EL since they share different characteristics in terms of motivation, learning autonomy, and others.

As in language as a power the writer will choose the topic then *'How the power of language in communication over the patient in corona virus influence to make them be better'*. The language is not only to express the empathy but also to make effort in a certain direction, recovery patient.

Method

The method in this research is qualitative, by using the conversation and then the collecting data used snowball sampling, which is submits all conversation then will analyze after describing for each purposes. The writer asks about sufferer of covid-19, among the patient isolated at hospital and at home, through the doctor or directly to the patient. The data source of this writing is about 15 people, The writer chooses the patient around or can be access by the voice note of conversation calling by phone, get from the doctor. The writer also used the secret data from the doctor to confirm as the medical treatment and the result of the medical last checkup.

The writer has taken some discussion and observation between the corona virus patient or the person in the symptom of corona virus 19 even they have been swab or not, but it will take as the example of this writing. In another research has been done before about health in the language used in clinical practice is a key enable to the successful in a treatment. Without good communication, which is under-pinned by values, therapeutic engagement and treatment, outcomes will not be as successful. (Vernan Richards, BSc Horns: publish 1;2019). The clinical journal has told us that, communication that serve by good communicate, will therapy, treatment successfully.

Results and Discussions

The power of language, in here, focused on the way of the language transform to the communication and how the language used to make the suffering will be comfortable. I have taken some observation to about more than 10 coronavirus survivor. Then person who is suffering the corona virus. I get that from the beginning we have get some information about how the corona virus, and then they explain in social media, government and health worker etc. People compare some conclusion of the social media information into to the information

from our government, health worker or even from World health organization (WHO) information. In order to make it real and accurate to respond the problem about the covid-19 victim.

In 2019 until now, it has been 2 years covid-9 around us, has taken human life, even it has caused by late handling, lack of medicine or other relate to the medical problem. Yet some aspect that should be another alternative of controlling the language communication that used through the patient or the sufferer.

Another important aspect that should be support is the corona virus19 survivor through their day. What is the specific treatment of their motivation from their selves or from outside? Power of language himself or herself and the nurse or doctor who take care them while the illness. The language express during the communication happened.

From the conversation1 among Mr Farhan and Mr Wendra as the covid-19 survivor, while Mr Farhan Suffering the corona virus they talk through direct by phone, Then Mr Wendra as the doctor in Bawan public health center (Puskesmas) monitoring the condition of his patient. He knows because of the limited of the medical equipment in the public health or even in the hospital in his town. So many that he suggests to stay at home, even they have their own problem in the health. The doctor always call the patient over time, until he has no privacy time during the corona virus 19 attacks this country. He say to the writer ‘ I almost call all my patient as the leader of the Public health center in this town, so I can control then check their condition. But then I just give them some vitamins and suggestion. While the writer ask Mr Wendra, How many time and how long that you will call the patient. I do not take the time properly, but sometimes I will consider how the patient understand what language and what is my purpose during I talk to them. I always say to him, ‘Don’t worry to this corona virus, and make sure that you will be get well soon. I have already call others. They have already pass the critical time; just consume all vitamin to support your physical immunity and ‘thinking immunity’. I used my language power to influence the way of their thinking, to skip all suffering of their illness.

In the other chances the writer also has try to call over the other patient that judge by the result of swab PCR test of corona virus, that they are the writer’s neighbor. They are 5 people that has infected by covid-19, first chronology the baby sitter has cough and then she didn’t want to go to the public health and inform to her family that she is sick. In the reason of she think she will be judges a corona virus-19 sufferer. The statement of the people around her, that is no covid-19 and the person who treated in the hospital will judged as the corona virus sufferer. Yet, she did not consulted to the family and employer. The family in that house are infected together, but she always asked by the employer to take medical treatment but she refused, until she is asked to back home. Then they family and the baby caring by the self- isolated treatment. Then she told me, that some of my suggestion of doing a positive language to empowered the patient. She always suggest to annoying the negative information during her healing. She said that her family, specially her cousin is a midwife, always called and told about making sure herself by using a sentence ‘ It’s usual illness, she will get well soon, and never be weak of the problem’s life. The direct sentence in the calling she never forget that” she has her baby and she has to recover from the illness. She say that she always convey to others, the covid-19 sufferer” We can control our viruses in our body. But late for the baby sitter that could not meet anymore, because she has to take a rest at her hometown. She never call and told the power magical language, as it’s, to her. Because the baby sitter did not believe the illness, and she always avoid telling the covid-19. In my assumption of the power of language we find that the useful. There are some suggestion but the very important is the way of communication utter in the conversation among the sufferer. That we can find in the following conversation to dr Wendra as the leader in the *public health in Bawan*, Agam. He said that the people who can’t get special health treatment, but dr Wendra always call each of his patient that are confirmed as the covid-19 patient. As the “Mrs Misrawati did you feel any pain? She answered that she cannot breathe easily. Then dr Wendra tries the suggestion about how to arrange the position as doctor and patient but still feel comfortable around the health worker.

Another conversation got from the nurses, which worked in isolation room as miss Ns. Peni Kurniati, S.Kep, say that “while she come into a patient named Silvia. She has comorbid but then, miss Peni say to Mrs Silvi, “the disease in your bodies are attacking and the viruses interfere the body, and I as a nurse cannot help you, if you didn’t help your selves, but as a way for you to fight the weakness in your body, and give assurance that you will recover.” Actually the patient becoming shock and then say that she wasn’t kind nurses, but then after listening more victim of covid-19 in the isolation room she try to understood the nurses say. She didn’t try to offen the patient. Yet then she didn’t told that to other patient, She gives advises as a long conversation and little bit not wise anymore for the beginning to Mrs Silvi. Then the nurses also knew the patient closely than another so she directly know the character of Mrs Silvi. She never be resentful. In other hand Miss Peni, try to another patient that has be contact oftentimes. She said “I have seen that more than 20 patients of covid-

19. I see that you are the power full, spirited. So I have suggestion of the condition, you against by your selves, none people could make you feel better than you.

From two of above observation and conversation I assume that a power language convince other as the receiver and the speaker, both actually has to understand themselves. Meanwhile they also has to think they know and arrange themselves as the purpose. In Shin Ha Yu (2020;30-32) a person who does not know the value of himself will not be able to know the value of others. That is why, we must learn languages, starting with learning to understand and love ourselves. It will express in order to the power suggestion from outside and than insides. In the writer's opinion the sentences that produce and utter to the receiver is a direct suggestion then need fast respond from the unconditional memories. Sigmund Freud In psychoanalytic terms, the unconscious does not include all that is not conscious, but rather what is actively repressed from conscious thought or what a person is averse to knowing consciously. Freud viewed the unconscious as a repository for socially unacceptable ideas, wishes or desires, traumatic memories, and painful emotions put out of mind by the mechanism of psychological repression. However, the contents did not necessarily have to be solely negative. In the psychoanalytic view, the unconscious is a force that can only be recognized by its effects—it expresses itself in the symptom. In a sense, this view places the conscious self as an adversary to its unconscious, warring to keep the unconscious hidden. Unconscious thoughts are not directly accessible to ordinary.

Afterward the Sigmund Freud say that something in a language or an unconscious thought comes from conscious one. For example actually the patient who hospitalized about 1 week then there is no spirit of life, even the speaker didn't know and didn't close friends or know each other before, but Miss Peni help and consider to explain by the language. She hopes that the patient will rise up then be get well soon. Actually Miss Peni has do for about 10 patient who have note before, so she gets good news for the result. Since unconscious means will effect to the wishes or act of the receiver to do what the speaker told before. In this case the speaker hope that the patient as the receiver in the communication understand and do what the speaker said later gradually.

Another case the head of forestry department in Pasaman clarify in a conversation that he point that unconscious among his children and wife told that none people will take care his family anymore if he didn't fight the covid-19 by him selves. Approximately the sentence express "Dad we have no idea, while you are in the hospital, we love you and your children still kids, who will take care us/ please fight the covid-19 you can do that!. Even though more than about 2 month she has no significant change to his body, he still found that he can't leave the hospital. In addition he has no congested but still has no appetite. At least Mr Karman that isolated in the special room and it like a hotel and has a privacy room, but rarely visit by other because he has get well no congested finally success to face and done her fighting by himselfes ince of the viruses effect.

In here can explain from the purpose of communicate of using power language is to Speak with an influencing audience. Speaking with the aim of influencing the listener is included in persuasive communication. In persuasive speaking, the speaker try to express the idea of the reader/receiver. Djamaludin Malik and Iriantara in Asep Supriyana (2008:10) said that persuasion is a erase the old image in his mind and replace it with an new image so that the behavior changes. There are 3 way in these formation, reinforcement and response change.

For those the aim of speaking has express of the cases of covid-19 patient who isolated at home or hospital, they are all gather in a mindset that it was a very dangerous but with no effort to recovery their body, until this situation by their doctor or their nurse and even by their family. By the same treatment in to that entire patient, we conclude that whole of language that has been express to persuade the patient to be a survival of covid-19 and by the minimum of negative effect post of suffering. Some language utter to provide the huge love of the speaker to bring up their memories, and it work for their spirit of life. In order to reduce the burden on health centers supplying very limited medicines

Conclusion

Language power is to manage and change the minds set and the effort of some patient in the public isolation of covid-19 or to build up the spiritual and the mental mature and then will change their life soon as possible. As the result the sufferer, reduce the effect of corona virus-19. Due to the way of language produces, the medical and non-medical worker, which attend the patient. It was formulated that all power language gently and power position of the speaker will make the patient change and move on from their rush condition.
